PROJECTS

Data Cleaning, Analysis & Excel Dashboard Project

2025 - Present

- Cleaned and organized raw datasets using Excel and Google Sheets
- Created charts and dashboards for data visualization and reporting
- Analyzed company distribution and business-related data
- Improved data accuracy and spreadsheet structure for easier reporting

Track Event: Vendors - Airtable Project

2025 - Present

- Built a vendor tracking and management system using Airtable
- Organized vendor and project information in a centralized database
- Managed data entry, categorization, and workflow structure
- Helped improve tracking and reporting for vendor-related activities

Employee Management System

2025-Present

- Developed a basic employee management system interface
- Worked on login/register structure and data organization features
- Managed employee-related records and spreadsheet-style data flow
- Focused on usability, organization, and clean interface structure

Aeternia - AI Virtual Streamer Project

2025-Present

- Developing an AI-powered virtual streaming assistant system
- Working with data flow, automation, and real-time interaction systems
- Managing backend structure, memory systems, and user interaction logic
- Using Node.js, React, and database systems for development
